

PROBLEM STATEMENT #32 | Retail, E-Commerce & Finance**Personal Subscription & Recurring Expense Auditor****1. Problem Context & Overview**

A personal finance micro-app that aggregates recurring bank charges, alerts users ahead of subscription renewal dates, calculates monthly burn rates, and provides one-click cancellation guides.

Target Stakeholders / Actors: *Individual User, Finance Auditor*

2. Sample Functional Requirement (FR) Guideline**Sample Requirement: FR-001 [Priority: High]**

Description: The system shall analyze transaction logs to identify recurring billing patterns and project total monthly subscription expenditure.

Sample Acceptance Criteria: Pass: Recurring service identified and renewal date logged; Fail: One-time payment misclassified as subscription.

3. Sample Non-Functional Requirement (NFR) Guideline**Sample Requirement: NFR-001 [Type: Performance & Security]**

Description: Financial transaction imports (CSV/OFX) must parse securely without storing raw banking credentials in cleartext.

Sample Acceptance Criteria: Pass: Benchmarking tests confirm target latency and security standards under simulated peak load.

Deliverables to Submit: [All through a GitHub Repo in your account]**• Complete Requirements Table:**

- >> Exactly 5 Functional Requirements (FR-001 to FR-005)
- >> 2 Non-Functional Requirements (NFR-001 & NFR-002) with ID, Type, Description, Priority, Acceptance Criteria, and Rationale.

• UML Use-Case Diagram:

- >> Model all actors, primary use cases, and include at least one «include» and one «extend» relationship.

• Use-Case Flow Specification:

- >> 1-page document for one core use case detailing Preconditions, Postconditions, Main Success Scenario
- >> One Alternate Flow.
