

PROBLEM STATEMENT #46 | Developer Tools & IT Operations**Remote Team Time-Tracking & Project Approver****1. Problem Context & Overview**

An engineering productivity platform tracking developer hours against Jira tickets, monitoring project budget burn rates, and facilitating managerial timesheet approval workflows.

Target Stakeholders / Actors: *Remote Developer, Engineering Manager*

2. Sample Functional Requirement (FR) Guideline**Sample Requirement: FR-001 [Priority: High]**

Description: The system shall allow developers to log time against specific project tasks and prevent timesheet submissions exceeding 24 hours in a single calendar day.

Sample Acceptance Criteria: Pass: Valid timesheet submitted for manager approval; Fail: Timesheet logging 30 hours in one day accepted.

3. Sample Non-Functional Requirement (NFR) Guideline**Sample Requirement: NFR-001 [Type: Performance & Security]**

Description: Timesheet approval status transitions and project budget burn charts must update across dashboards within 500 ms.

Sample Acceptance Criteria: Pass: Benchmarking tests confirm target latency and security standards under simulated peak load.

Deliverables to Submit: [All through a GitHub Repo in your account]**• Complete Requirements Table:**

- >> Exactly 5 Functional Requirements (FR-001 to FR-005)
- >> 2 Non-Functional Requirements (NFR-001 & NFR-002) with ID, Type, Description, Priority, Acceptance Criteria, and Rationale.

• UML Use-Case Diagram:

- >> Model all actors, primary use cases, and include at least one «include» and one «extend» relationship.

• Use-Case Flow Specification:

- >> 1-page document for one core use case detailing Preconditions, Postconditions, Main Success Scenario
- >> One Alternate Flow.
